Abstract

From here, begin your abstract. ...

1 Introduction

Section 1.1 presents a short overview of the philosophy and history of LaTeX. Section 1.2 focuses on the basic structures of a LaTeX document.

1.1 History

TeX is a computer program created by Donald E. Knuth. It is aimed at typesetting text and mathematical formulae. LaTeX was originally written by Leslie Lamport.

1.2 Basic structures

To help the reader find his or her way through your work, you should divide it into sections, subsections and subsubsections. LaTeX supports this with special commands that take the section title as their argument. It is up to you to use them in the correct order.

1.2.1 Title

To publish something, authors give their typed manuscript to a publishing company.
